MICRO-TRAINING NUDGES · CONTEXTUAL, NATIVE-LANGUAGE

Training that arrives **before** the defect.

When drift is detected, a 5-10 min lesson is auto-assembled for the exact sub-skill and pushed to the worker's device — in the language they think in.

ROI REPORT · H1 2026

\$827k saved. -46% defects. One model.

Every micro-training nudge is tied back to the sensor signature it corrected and the defect it prevented. The math is auditable.
